

DOLPHI
SONUS

SAVE YOUR CHILD'S LIFE AT THE POOL

With our unique AI
technology based passive
sonar pool alarm system

Detection of a fall within 2 seconds

Works perfectly with other safety measures
Fencing, roller covers etc.

System complies with ASTM-2208-08 requirements

2000 ft range

Uses new generation Bluetooth low energy audio technology

Automatically switches back to surveillance mode
Even after swim mode

Surveillance 24/7

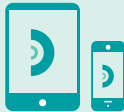

3 years limited warranty

Immediate exchange

No maintenance
Just battery charging

Very simple to use
On smartphone and dedicated tablet

Free smartphone App on IO's and Android

Too many accidents happen at the pool, even during the presence of the parents, with over 800 children tragically drowning in the US every year.

A few years ago, the daughter of a family member nearly drowned, while the parents were in the pool house with friends. Can you imagine losing your son or daughter only a few metres away? So Guy's wife asked us if something could be done.

With experience in engineering aviation, sonar monitoring and artificial intelligence, we set about developing a unique pool alarm system that was able to detect the fall of a child into a pool.

The result is Dolphisonus
